Software Engineer passionate about learning and creating.

Skills

- JavaScript | React | React Native | React Server Components | Next.js | Expo | Node.js | Tailwind | HTML | CSS | Figma
- Rest API | PostgreSQL | MySQL | MongoDB | Hazelcast | n8n | OOP | Git
- Python | OpenCV | PyTorch | TensorFlow | Keras | EEL | Tkinter | Ultralytics | English, Turkish

Professional Experience

Software Engineer @ CEITSSLAB

Istanbul, Türkiye | 09/2023 - 08/2025

- Developed computer vision-based solutions for vehicle counting and empty parking spot detection, enhancing urban mobility and resource efficiency.
- Implemented algorithms using Python, OpenCV, and deep learning frameworks to increase object detection accuracy.

Front-End Engineer @ ThisIsMatris

Samsun, Türkiye | 12/2023 - 10/2024

- Developed and implemented the project's user interface using the React and Next.js ecosystem, ensuring responsive design and smooth user experience.
- Collaborated in designing and developing the project's database architecture, contributing to efficient data modeling.
- Optimized the performance of both front-end and back-end services, improving load times, API efficiency, and overall application stability.

Front-End Intern @ WebBeyaz

Samsun, Türkiye | 06/2023 - 09/2023

- Contributed to two high-impact eCommerce projects, collaborating with cross-functional teams to enhance user experience and performance.
- Participated in weekly progress meetings with project managers to review milestones, identify bottlenecks, and align development goals with business objectives.
- Developed and optimized web components using Next.js, gaining hands-on experience with React architecture, component-based design, and front-end best practices.

Education

B.Sc, Computer Engineering @ Ondokuz Mayıs University

Samsun, Türkiye | 2020 - 2025

Projects

Smart Parking & Vehicle Counting System - 2025

- Designed and developed a vision-based vehicle detection and smart parking management system aimed at improving urban traffic efficiency.
- Built the complete front-end interface using EEL, React, Next.js, and Tailwind, ensuring a clean, responsive, and data-driven user experience.
- Implemented deep learning models with Python, TensorFlow, and OpenCV, achieving high accuracy in vehicle recognition and vacant spot detection.
- Optimized model performance and minimized false positives through dataset curation and hyperparameter tuning.

Natural Language Processing & LLM-Based AI Systems - 2025

- Competed in the TEKNOFEST AI category, developing intelligent NLP systems capable of contextual understanding and semantic reasoning.
- Developed user interfaces with React and Next.js, enabling interactive visualization of NLP results and model outputs.
- Built and fine-tuned transformer-based architectures (LLMs) for text classification and intent recognition using PyTorch and TensorFlow.
- Improved model generalization and training efficiency through deep learning optimization techniques.

artifAUS: AI in Transportation Competition - 2024

- Engineered AI-powered solutions to optimize traffic management and route planning for TEKNOFEST, Turkey's largest technology competition.
- Developed the project's UI using React, Next.js, and Tailwind, enabling live monitoring of traffic data and simulation results.
- Implemented machine learning algorithms for real-time traffic flow prediction and intelligent routing, enhancing decision-making accuracy.
- Collaborated in a multidisciplinary team integrating sensor data, analytics dashboards, and simulation tools.

OMU AGRITECH Research Project – Autonomous Unmanned Ground Vehicle (UGV) - 2024

- Built control and monitoring interfaces using React, Node.js, and Tailwind, enabling real-time feedback from onboard sensors.
- Developed sensor fusion and AI-based pathfinding algorithms to support autonomous field navigation and precision farming.
- Assisted in integrating obstacle detection and route optimization systems powered by machine learning models.
